Eighty patients had a disarticulation of the hip for sarcoma with a minimum follow-up of 2 years. There were 56 males and 24 females and the ages ranged from 7 to 93 with a median of 44. Forty-six patients had bone sarcomas and 34 had soft tissue sarcomas.

Outcome after disarticulation of the hip for sarcomas ...

The sarcoma has much less chance of coming back after surgery if it's removed with clear margins. In this case, surgery may be the only treatment needed. When the tumor is in the abdomen, it can be hard to remove it and enough normal tissue to get clear margins because the tumor could be next to vital organs that can't be taken out.

Surgery for Soft Tissue Sarcomas - American Cancer Society

In the past, most patients with extended sarcomas of the femur had amputation, hip disarticulation, or hemipelvectomy as treatment with poor function [19, 20]. The advent of new drugs and improved imaging techniques allowed conservative treatment of tumors of the femur with limb salvage procedures [3 , 14 , 26 , 28].
