One advantage of using Grasshopper for parametric design and geometry modeling is that, during the CAD model generation, one can design the generative algorithm to ensure that the resulting IGA model is analysis-suitable. The concept of parametric modeling is central to design in many fields of engineering and beyond (e.g., architecture).

Geometry modeling in the Ansys Workbench environment is highly automated and also provides users the flexibility to customize according to the type of analysis or application. The feature-based, parametric Ansys DesignModeler software can be used to create parametric geometry from scratch or to prepare an existing CAD geometry for analysis.
