Reticular formation Author: Lorenzo Crumie MBBS, BSc • Reviewer: Jerome Goffin Last reviewed: September 30, 2021 Reading time: 14 minutes After spending hours reading anatomy, watching videos, and examining cadavers, the average student has used up a vast amount of ATP (adenosine triphosphate) and consequently requires sleep.

Reticular formation: Anatomy and clinical notes | Kenhub

Optic nerve in a cadaver. It is the most prominent neural structure of the orbit. Just before it enters the optic canal, CN II can be found adjacent to CN III, CN VI and the nasociliary nerve, and superomedial to the ophthalmic artery. Within the canal, there are numerous fibrous dural attachments that extend to the pia mater.

Nerve plexus - Wikipedia

The transpyloric plane, also known as Addison's plane, is an imaginary horizontal plane, located halfway between the suprasternal notch of the manubrium and the upper border of the symphysis pubis at the level of the first lumbar vertebrae, L1. It lies roughly a hand's breadth beneath the xiphisternum or midway between the xiphisternum and the umbilicus.
