Introduction. Anatomical diagrams and descriptions of the gross anatomy of the lactating human breast have changed little over the last 160 years and are based on meticulous dissections of the breasts of lactating cadavers (Fig. 1) by Sir Astley Cooper (Cooper, 1840).Furthermore, many of the descriptions and illustrations do not correspond with Cooper's original work.

LECTURE NOTES Human Anatomy and Physiology - Academia.edu

The human genome consists of two copies of each of 23 chromosomes (a total of 46). One set of 23 comes from the mother and one set comes from the father. Of these 23 pairs of chromosomes, 22 are autosomes, and one is a sex chromosome. There are two kinds of sex chromosomes-X and Y.in humans and in almost all other mammals, females carry two X chromosomes, designated XX, and males carry one X ...

Sex differences in human physiology - Wikipedia

The liver is a reddish-brown, wedge-shaped organ with two lobes of unequal size and shape. A human liver normally weighs approximately 1.5 kg (3.3 lb) and has a width of about 15 cm (6 in). There is considerable size variation between individuals, with the standard reference range for men being 970–1,860 g (2.14–4.10 lb) and for women 600–1,770 g (1.32–3.90 lb).

Liver - Wikipedia

Cones. Cones are conical shaped cells that operate best in high intensity lighting (photopic) and are responsible for the perception of colour.There are far fewer cone cells in the human retina compared to rod cells, numbering approximately 4.6 million.Cone outer segments are generally shorter than that of rods and, as their name implies, are often conical.

Photoreceptors: Rods and cones - Kenhub

An integrated multimodal census and atlas of cell types in the primary motor cortex of mouse, marmoset and human. The mouse MOp consensus transcriptomic taxonomy at the top is used to anchor cell type features in all the other modalities. Subclass labels are shown above major branches and cluster labels are shown below each leaf node.
