The average intake temperature sensor replacement cost is between \$40 and \$250, depending on the car model and labor costs. An intake temperature sensor costs \$20 to \$150, and the labor costs \$20 to \$100. If your intake temperature sensor is integrated into the MAF sensor, the part cost can increase rapidly. Some MAF sensors cost up to \$400.

According to Ford, this is a primary input in the PCM's strategy to control Torque Converter Clutch (TCC) operation. This 2 wire sensor (Figures 1 and 2) is checking metal temperature and is used to infer coolant temperature. A basic description of the sensor is that it is a thermistor device in which resistance changes with temperature.

Some coolant technologies can protect as low as pH 6.5, however, it is typically not good practice to allow a coolant to operate below a pH of 7.0. Glycol breakdown products are acidic and contribute to a drop in pH. Once a coolant has degraded, due to glycol breakdown and pH drop, engine metals are at risk for corrosion. Coolant degradation ...
