The superimposition of serial headfilms on metallic implants is considered the most precise and reliable technique to monitor growth and adaptation in the craniofacial region. 1 With the use of such metallic implants (pins) as reference points in longitudinal cephalometric investigations, Björk and coworkers 2-7

BACKGROUND: The aim of this study was to establish a computer-aided automated method for cephalometric superimposition and to evaluate the accuracy of this method based on free-hand tracing.

METHODS: Twenty-eight pairs of pre-treatment (T1) and post-treatment (T2) cephalograms were selected.
