According to the World Health Organization (WHO), occupational burnout is a syndrome resulting from chronic work-related stress, with symptoms characterized by "feelings of energy depletion or exhaustion; increased mental distance from one's job, or feelings of negativism or cynicism related to one's job; and reduced professional efficacy." While burnout may influence health and can be a ...

Occupational burnout - Wikipedia

This phase has three steps: 1. An analysis strategy is developed to guide the project team's efforts. Such a strategy usually includes an analysis of the current system (called the as-is system) and its problems, and then ways to design a new system (called the to-be system). 2. The next step is requirements gathering (e.g., through interviews or questionnaires).
