This is because starting with SQL Server 2014 (12.x), all Query Optimizer changes are tied to the latest database compatibility level, so plans are not changed right at point of upgrade but rather when a user changes the COMPATIBILITY_LEVEL database option to the latest one. This capability, in combination with Query Store gives you a great ...

Post-migration Validation and Optimization Guide - SQL ...

This plan reuse can happen even if you are logged in as a different user than the application connection uses. I tested this by executing a test query first from a web application then from management studio with SET ARITHABORT OFF and could see the usecounts going up from the below query.

Why would SET ARITHABORT ON dramatically speed up a query?

Only enable user license management if: you are not using classic folders; ☐☐. Migration. If you are migrating from on-premises Orchestrator to

Automation Cloud Orchestrator while in a classic folder setup, make sure user licensing is turned off as this functionality is not compatible with classic folder setups.. your organization is using interactive authentication.

User License Management - UiPath Automation Cloud

ANSI-standard SQL specifies five types of JOIN clauses as follows:. INNER JOIN (a.k.a. “simple join”): Returns all rows for which there is at least one match in BOTH tables.This is the default type of join if no specific JOIN type is specified.. LEFT JOIN (or LEFT OUTER JOIN): Returns all rows from the left table, and the matched rows from the right table; i.e., the results will contain ...
