### Shortwave Station Guide - Shortwave Radio and Tech Links

Shortwave radio is an audio network that operates on frequencies in between the FM and AM bands. Its primary advantage is that data can be transferred throughout long distances and can reach the masses through one transmitter. Messages and sound are transmitted through electromagnetic waves that range from 10 to 80 meters long (33-262 feet).

Shortwave listening (commonly abbreviated to SWL) is the fascinating hobby of listening in to broadcasters around the world. This can be done at minimal cost from anywhere in the world without having to reply on anyone else. All that is required is a suitable Shortwave (SW) radio receiver and an antenna. Often the antenna is part of the receiver.

### Shortwave Listeners Guide - Tecsun

Shortwave Listening Tips: Listen to Asia and Australia in the morning and listen to Europe at night. No SW frequency operates 24 hours. You may not hear anything unless you are listening at the right time, or you may hear another language, or you may hear some other country sharing the frequency.

### Shortwave Frequency List - C. Crane Company

Shortwave radio displays usually come in two types: digital and analog. I always recommend that newcomers purchase a radio with a digital display (and, preferably, with a keypad for direct frequency entry) if they don't already have a radio. That's the reason why you won't find an analog display on my recommended radios page.
