The 90+ Study was initiated in 2003 to study the oldest-old, the fastest growing age group in the United States. The 90+ Study is one of the largest studies of the oldest-old in the world. More than 1,600 people have enrolled. Because little is known about people who achieve this milestone, the remarkable increase in the number of oldest-old presents a public health priority to promote the ...

INTRODUCTION. The idea of innate biologic ("endogenous") cause of obesity was first proposed by Von Noorden in 1907 1. This concept of genetic cause for obesity has been investigated time and again since then 2. The landmark studies of body fatness in 540 adopted Danish twins by Stunkard and colleagues showed that the weight of the adults was closer to their biological parents despite being ...
